

ESSEX COUNTY VOCATIONAL TECHNICAL SCHOOLS

2016-17

COURSE CATALOG

Administration

James Pedersen, Ed.D.	Superintendent
Dixiana Carbonell, Ed. S.	Supervisor of Curriculum & Instruction
Michael Zelkowitz, Ph.D.	Supervisor of Special Education
Mary Beth Landis	Supervisor of Mathematics
Grisel Morales	Supervisor of English Language Arts
Chetram Singh	Supervisor of Instructional Services (VPA)
Salvatore Lima	Supervisor of STEM
Cathleen Smith	Supervisor of Social Studies
Enrique Lomba	Supervisor of ESL/World Language
Gerhard Sanchez	Director of Athletics (PE/Health)

TABLE OF CONTENTS

CONTENT AREAS

ENGLISH LANGUAGE ARTS (& ESL)	2-6
MATHEMATICS	6-10
SCIENCE	10-13
SOCIAL STUDIES	13-14
COMPREHENSIVE HEALTH & PHYSICAL EDUCATION	14-16
VISUAL & PERFORMING ARTS	16-17
WORLD LANGUAGE	17-19

ENGLISH LANGUAGE ARTS

English Literary Survey

Credits: 10 Credits

Prerequisite: Terranova Assessment Performance

English Literary Survey continues the study of the literary genres (novel, short story, poetry, etc.). Exploration of each genre's literary elements; determination of theme and intent; and examination of vocabulary and semantics, grammar and usage are included in the course content. Reading, writing and speaking assignments are required as an additional method to improve understanding and comprehension. Students entering the ninth grade will build a foundation in fiction, drama, poetry, mythology, and literary nonfiction. In addition, they will analyze literature from various angles, to view literature in historical context, and to observe connections between literature and the arts. In their essays, students will analyze, compare and contrast, create arguments and/or take a position on stated claims. Students will engage in structured discussions that examine philosophical questions that arise in certain works. By encouraging students to generate critical thinking inquiries and topics for discussion and written expression, they are prepared for a focused literary study: American Literature in grade 10, British Literature in grade 11, and World Language in grade 12.

Honors English Literary Survey

Credits: 10 Credits

Prerequisite: Honors Criteria

Honors English Literary Survey includes the study of literature from a variety of genres, cultures and historical periods. Students will explore issues, ideas and cultural aspects found in short stories, novels, poetry, drama, music and media. Students will individually and collaboratively create and present a number of written projects including essays and presentations, which will integrate research, literature, art, film, music and multimedia. Students will write in a variety of writing styles, analyzing, explaining, and/or evaluating a variety of subjects including identifying and analyzing recurring themes, compare and contrasting of writing styles, characterization, points of view. Students will formulate thesis statements and/or major claims, and back up these claims with evidence using both fiction and non-fiction texts. Grammar usage, mechanics and vocabulary building through learning activities are designed to strengthen and build upon existing skills and knowledge. By encouraging students to generate critical thinking inquiries and topics for discussion and written expression, they are prepared for an advanced course of study: Honors American Literature in grade 10, Honors British Literature and /or AP Language & Composition in grade 11, Honors World Literature and/or AP Literature & Composition in grade 12.

American Literature

Credits: 10 Credits

Prerequisite: English Literature Survey

American Literature focuses on American authors and their work. This course is devoted to the study of American literature from colonial to modern period. Much of the literature is nonfiction (diaries, letters, sermons, almanacs, speeches, and foundational documents); there are many opportunities to analyze historical and informational texts and make connections with history, art, and other subjects. Students continue to build on their writing skills, integrating multiple sources and perspectives into their work, reading literary criticism, and writing longer and more complex essays. The course will include short texts, poetry and other selections from non-fiction literary text, as well as American based novels and plays. By encouraging students to generate critical thinking inquiries and topics for discussion and written expression, they are prepared for a focused literary study: British Literature in grade 11 and World Language in grade 12.

Honors American Literature

Credits: 10 Credits

Prerequisite: English Literary Survey; Honors English Literary Survey

Honors American Literature course develops student understanding of the history and cultural progression of our country through fiction and non-fiction literature. Students will explore selections by contemporary as well as traditional American authors from diverse cultural and ethnic origins. Students will engage in dialogue, reflection, formal and informal writing including analysis, narrative, compare-and-contrast, etc. A formal research paper will reinforce research skills and focus on organization and source documentation. Grammar usage, mechanics and vocabulary through learning activities are designed to strengthen and build upon existing skills and knowledge. By encouraging students to generate critical thinking inquiries and topics for discussion and written expression, they are prepared for an advanced course of study: Honors British Literature and/or AP Language & Composition in grade 11, Honors World Literature and/or AP Literature & Composition in grade 12.

British Literature

Credits: 10 Credits

Prerequisite: American Literature; Honors American Literature

British Literature exposes the student to selected timeframes of England's development both literary and historically focusing on the literature reflective of the time (short stories, plays, poems, etc.) from Anglo Saxon to Modern time. Using complex literary forms such as short story, poetry, novels, and informative texts, students read and discuss in writing and orally how earlier works influence later works and how forms and ideas have evolved over time. Students improve their critical-thinking skills by determining the underlying assumptions and values in the literature and its reflection the time period. British Literature also includes an ongoing focus on language skills/writing, and vocabulary and oral discussions. By encouraging students to generate critical thinking inquiries and topics for discussion and written expression, they are prepared for a focused literary study: World Language in grade 12.

Honors British Literature

Credits: 5 Credits

Prerequisite: Honors American Literature

Honors British Literature is a literature-based course of study with focus on the history of British literature. The chronologically based literature begins with the Anglo-Saxon Period and consists of theme-oriented poetry, short stories, essays, non-fiction, and full-length works as it moves into Modern Times. Literary devices, content, style, and cultural diversity are studied in addition to vocabulary skills, library and research skills, public speaking, and various forms of essay/report writing. Students improve grammar and usage skills through guided writing and emphasis is placed on the development of critical and analytical thinking skills through discussion and writing to reading texts. By encouraging students to generate critical thinking inquiries and topics for discussion and written expression, they are prepared for an advanced course of study: Honors World Literature and/or AP Literature & Composition in grade 12.

Journalism

Credits: 5 Credits

Prerequisite: American Literature

Journalism will encompass all of the introductory, yet crucial elements of responsible reporting, including intellectualizing, editing, and media coverage. Via the exploration of professional, critical writing and coverage of ethical issues, students will be able to appropriately address, discuss, and demonstrate both objective and subjective journalism. The course will also differentiate between hard news reporting and opinion-based writing.

Additionally, students will improve skills relating to grammar, composition, investigation, and interview techniques. The course will also integrate components of the British Literature curriculum and current events in an effort to allow students to build a journalistic foundation via literary and world sources. Furthermore this course will further strengthen (as in all the English courses offered), general study skills, particularly analytical reading, expository writing, and oral communications comparable to what they are expected to produce in a college level course.

AP Language & Composition

Credits: 10 Credits

Prerequisite: Honors American Literature

The AP course in English Language and Composition engages students in becoming skilled readers of prose written in a variety of rhetorical contexts, and in becoming skilled writers who compose for a variety of purposes. Both their writing and their reading should make students aware of the interactions among a writer's purposes, audience expectations, and subjects, as well as the way genre conventions and the resources of language contribute to effectiveness in writing.

World Literature

Credits: 10 Credits

Prerequisite: British Literature

World Literature allows students to closely study literature from around the world, as well as analyze the historical and cultural context. Students continue in their quest to become critical thinkers, readers, and effective writers by focusing on the communication skills needed to be successful in the course and later in college and career. Students will write using standard written language through informal and formal papers and for a variety of audiences and purposes. Students in this course will gain a global perspective through inquiry into a variety of the world's literary cultures and their distinctive perceptions of the political, economic, and religious forces sweeping the world. This course uses representative literature selections (poems, novels, informational texts, etc.) from ancient and/or modern times from countries around the world. Students improve their critical thinking skills, as they comprehend the diversity of literary traditions and influences of those traditions. Oral discussion is an integral part of the course as are written compositions.

Honors World Literature

Credits: 10 Credits

Prerequisite: British Literature; Honors British Literature

Honors World Literature offer students an intensive study of diverse literature, cultures, and ideas. Students explore key literary fictional and non-fictional texts to develop the skills of critical and inquisitive thinkers, recognizing the global connections of our world. Using inference, analysis, evaluation and synthesis, students will use logic and reasoning to discuss and write essays. Students will provide textual evidence to support their writing, claims, opinions, and interpretations of the works. Students will develop an appreciation and respect for world literature and its reflection on culture, history, society, economy, and politics of a point in time and how these influence our global interactions.

AP Literature & Composition

Credits: 10 Credits

Prerequisite: Honors British Literature

Following the College Board's suggested curriculum designed to parallel college-level English courses, the AP English Literature and Composition course enables students to develop critical standards for evaluating literature.

Students study the language, character, action, and theme in works of recognized literary merit; enrich their understanding of connotation, metaphor, irony, syntax, and tone; and write compositions of their own (including literary analysis, exposition, argument, narrative, and creative writing).

ENGLISH AS A SECOND LANGUAGE (ESL)

Beg ESL/Literary Survey

Credits: 10 Credits

Prerequisite: Terranova Assessment Performance & WAPT Performance

Beg ESL/Literary Survey is designed to provide non-native English speakers with a variety of learning activities specifically geared towards developing students' English proficiency and content specific language. It also includes an infusion of the Literary Survey course offered to native English speakers to expose the ELL students to the same intensive study as their peers and further develop students' skills in reading, writing, speaking, listening, viewing, and media literacy, introduction to literature, development of vocabulary and usage skills in effective writing. Emphasis is also placed on writing: grammatical correctness, sentence structure, paragraph formation, and organization of clear, concise essays. Students will not only build a foundation in acquiring a second language but will be exposed to fiction, drama, poetry, mythology, and literary nonfiction. This is achieved not only with the use of the ESL curriculum but also with exposure to the same literary texts from the Literary Survey curriculum for the Regular English Students. The student will with differentiation analyze literature from various angles, in historical context, and observe connections between literature and the arts across the major genres (short story, novel, poetry, drama, epic poetry, and literary nonfiction). Students will discuss and write about works, memorize short poems and excerpts of speeches and orally present to assist them with pronunciation.

Intermediate ESL/American Literature

Credits: 10 Credits

Prerequisite: Beg ESL/Literary Survey & ACCESS for ELLs Performance

Intermediate ESL/American Literature are designed to provide non-native English speakers with a variety of learning activities specifically geared towards developing students' English proficiency and content specific language. It also includes an infusion of American Literature from the Puritan Period to Modern Literature. Students study primary historical documents, plays and Shakespearean drama, as those offered to native English speakers to expose the ELL students to the same intensive study as their peers. Students further develop their skills in writing, speaking, listening, viewing, and media literacy. Emphasis is also placed on writing: grammatical correctness, sentence structure, paragraph formation, and organization of clear, concise essays. ESL students entering the tenth grade will continue to build on their learning of English as a Second Language but will also continue analyzing fiction, drama, poetry, mythology, and literary nonfiction. This is achieved with continued exposure to the same literary texts listed in the American Literature curriculum for the Regular English Students in addition to the ELS curriculum using the textbook Edge. The students will with differentiation analyze literature from various angles, in historical context, and observe connections between literature and the arts across the major genres (short story, novel, poetry, drama, epic poetry, and literary nonfiction). Students will discuss and write about works, memorize short poems and excerpts of speeches and orally present to assist them with pronunciation.

Advanced ESL/British Literature

Credits: 10 Credits

Prerequisite: Intermediate ESL/American Literature ACCESS for ELLs Performance

Adv ESL/ British Literature is designed to provide non-native English speakers with a variety of learning activities specifically geared towards developing students' English proficiency and content specific language. It also includes an infusion of British Literature from the Medieval Period through Postmodern/Contemporary. Another focus of study is on the historical background, cultural context, and literary analysis of selected prose, poetry, and drama. Upon completion, students should be able to interpret, analyze, and respond to literary works in their historical and cultural contexts.

Students will study historical periods of the British literature such as Medieval, Renaissance, 17th and 18th Century, Romantic, Victorian, Modern and postmodern eras. All the literary texts (fiction, nonfiction, drama, poetry and informational texts, etc.) will focus on different types of genres, and themes. Students also further develop their skills in speaking, listening, viewing, and media literacy. Grammatical correctness, sentence structure, paragraph formation, is continuously being developed with the exposure and creation of writing tasks for different audiences and purposes.

MATHEMATICS

Algebra 1A

Credits: 10 Credits

Prerequisite: Terranova Assessment Performance

This course is the first part in a multi-part sequence of Algebra I. This course generally covers the same topics as the first semester of Algebra I, including the study of properties of rational numbers (i.e., number theory), ratio, proportion, and estimation, exponents and radicals, the rectangular coordinate system, sets and logic, formulas, and solving first degree equations and inequalities.

Algebra is the study of patterns and functions. In Algebra 1A, students: focus on understanding the big ideas of equivalence and linearity; learn to use a variety of representations, including modeling with variables; begin to build connections between geometric objects and algebraic expressions; and use what they have learned previously about geometry and measurement.

Algebra 1A builds a strong conceptual foundation for students as they continue the study of mathematics. The core Algebra 1A content described in this draft includes content needed to promote deep understanding of algebraic concepts that builds as students' progress through higher levels of mathematics. Students studying Algebra 1A should use appropriate tools (e.g., algebra tiles to explore operations with polynomials, including factoring) and technology, such as regular opportunities to use graphing calculators and spreadsheets. Technological tools assist in illustrating the connections between algebra and other areas of mathematics, and demonstrate the power of algebra.

Algebra 1A course content primarily consists of the Operations on Numbers and Expressions and the Linear Relationship strands. The Non-linear Relationships and Data, Statistics, and Probability strands will be included in the Algebra 1B course content.

Algebra 1B

Credits: 5 Credits

Prerequisite: Algebra 1A

This course is the second part in a multi-part sequence of Algebra I. This course generally covers the same topics as the second semester of Algebra I, including the study of properties of the real number system and operations, evaluating rational algebraic expressions, solving and graphing first degree equations and inequalities, translating word problems into equations, operations with and factoring of polynomials, and solving simple quadratics.

Algebra is the study of patterns and functions. In Algebra 1B, students: focus on understanding the big ideas of Non-linear Relationships and Data, Statistics, and Probability; learn to use a variety of representations, including modeling with variables; begin to build connections between geometric objects and algebraic expressions; and use what they have learned previously about geometry and measurement.

Algebra 1B builds a strong conceptual foundation for students as they continue the study of mathematics. The core Algebra 1B content described in this draft includes content needed to promote deep understanding of algebraic concepts that builds as students' progress through higher levels of mathematics. Students studying Algebra 1B should use appropriate tools and technology, such as regular opportunities to use graphing calculators and spreadsheets. Technological tools assist in illustrating the connections between algebra and other areas of mathematics, and demonstrate the power of algebra.

Algebra 1

Credits: 10 Credits

Prerequisite: Terranova Assessment Performance

Algebra I includes the study of properties and operations of the real number system; evaluating rational algebraic expressions; solving and graphing first degree equations and inequalities; translating word problems into equations; operations with and factoring of polynomials; and solving simple quadratic equations.

Algebra 1 is a course that will focus on the study of Relationships Between Quantities and Reasoning with Equations, Linear Relationships, Expressions and Equations, Quadratic Functions and Modeling, and Functions and Descriptive Statistics. In this Algebra 1 course, effective communication using the language of mathematics is essential. Correct use of mathematical definitions, notation, terminology, syntax and logic should be required throughout the course. Real world applications are presented within the course content and a function's approach is emphasized.

Honors Algebra 1

Credits: 5 Credits

Prerequisite: Terranova Assessment Performance & Honors Criteria

Honors Algebra I includes the study of properties and operations of the real number system; evaluating rational algebraic expressions; solving and graphing first degree equations and inequalities; translating word problems into equations; operations with and factoring of polynomials; and solving simple quadratic equations. This honors course is designed to provide students with an in-depth level of instruction at an accelerated pace, and to extend the instruction by including reasoning, application, and modeling problems.

Honors Algebra is designed for students in an accelerated program and will focus on the study of Linear Equations and Functions, Quadratics Equations and Functions, and an introduction to Exponential Functions.

This course extends and deepens the topics of the regular course. In this Honors Algebra 1 course, effective communication using the language of mathematics is essential. Correct use of mathematical definitions, notation, terminology, syntax and logic should be required throughout the course. Real world applications are presented within the course content and a function's approach is emphasized.

Geometry

Credits: 5 Credits

Prerequisite: Algebra 1

This Geometry course, emphasizing an abstract, formal approach to the study of geometry, includes topics such as properties of plane and solid figures; deductive methods of reasoning and use of logic; geometry as an axiomatic system including the study of postulates, theorems, and formal proofs; concepts of congruence, similarity, parallelism, perpendicularity, and proportion; and rules of angle measurement in triangles. By the end of this course, students will have enough knowledge to move on to an Algebra II class and be successful.

Honors Geometry

Credits: 5 Credits

Prerequisite: Honors Algebra 1

This Honors Geometry course, emphasizing an abstract, formal approach to the study of geometry, includes topics such as properties of plane and solid figures; deductive methods of reasoning and use of logic; geometry as an axiomatic system including the study of postulates, theorems, and formal proofs; concepts of congruence, similarity, parallelism, perpendicularity, and proportion; and rules of angle measurement in triangles. This honors course is designed to provide students with an in-depth level of instruction at an accelerated pace, and to extend the instruction by including reasoning, application, and modeling problems.

Honors Geometry is designed to introduce students to the fundamental concepts of Geometry, but with high performance expectations. Honors Geometry includes all the subject content of the regular geometry course but more emphasis is given to algebra, logic, third dimension, transformational geometry and technology to prepare students for other courses in the enriched high school mathematics sequence. To appreciate the power of logic as a tool for understanding the world around you, the concept of proof is a substantial focus of the course. Because development of precise mathematical language is stressed, reading and problem solving are emphasized throughout.

Discrete Mathematics

Credits: 5 Credits

Prerequisite: Algebra 1

Discrete Mathematics includes topics such as number theory, discrete probability, set theory, symbolic logic, Boolean algebra, combinatorics, recursion, basic algebraic structures and graph theory.

Algebra 2

Credits: 5 Credits

Prerequisite: Geometry

Algebra 2 course topics typically include field properties and theorems; set theory; operations with rational and irrational expressions; factoring of rational expressions; in-depth study of linear equations and inequalities; quadratic equations; solving systems of linear and quadratic equations; graphing of constant, linear, and quadratic equations; properties of higher degree equations; and operations with rational and irrational exponents.

This Algebra 2 course is designed to build upon the previous algebraic and geometric topics covered. It should reinforce previous important topics such as solving linear equations, graphing linear functions (using slope intercept form, intercepts, and tables), and simplifying expressions. Emphasis should be placed on representing

elementary functions in numerous ways such as graphically, algebraically, numerically, and verbally. These elementary functions should include linear, quadratic, higher order polynomial, exponential, logarithmic, and rational functions. Problem solving involving all types of elementary functions will be the main focus of this course. This course will also include an extension of the number system into the complex field (e.g...imaginary unit and complex numbers), solving linear systems, use of matrices to solve real world situations, probability involving counting principles, and summarization and comparison of data sets. By the end of this course, students will have enough knowledge to move on to a Pre-Calculus class and be successful.

Honors Algebra 2

Credits: 5 Credits

Prerequisite: Honors Geometry

Algebra 2 course topics typically include field properties and theorems; set theory; operations with rational and irrational expressions; factoring of rational expressions; in-depth study of linear equations and inequalities; quadratic equations; solving systems of linear and quadratic equations; graphing of constant, linear, and quadratic equations; properties of higher degree equations; and operations with rational and irrational exponents. This honors course is designed to provide students with an in-depth level of instruction at an accelerated pace, and to extend the instruction by including reasoning, application, and modeling problems.

This Honors Algebra 2 course is designed to build upon the previous algebraic and geometric topics covered. It should reinforce previous important topics such as solving linear equations, graphing linear functions (using slope intercept form, intercepts, and tables), and simplifying expressions. Emphasis should be placed on representing elementary functions in numerous ways such as graphically, algebraically, numerically, and verbally. These elementary functions should include linear, quadratic, higher order polynomial, exponential, logarithmic, and rational functions. Problem solving involving all types of elementary functions will be the main focus of this course. This course will also include an extension of the number system into the complex field (e.g...imaginary unit and complex numbers), solving linear systems, use of matrices to solve real world situations, probability involving counting principles, and summarization and comparison of data sets. By the end of this course, students will have enough knowledge to move on to a Pre-Calculus class and be successful.

Pre Calculus

Credits: 5 Credits

Prerequisite: Algebra 2

Pre-Calculus combines the study of Trigonometry, Elementary Functions, Analytic Geometry, and Math Analysis topics as preparation for calculus. Topics typically include the study of complex numbers; polynomial, logarithmic, exponential, rational, right trigonometric, and circular functions, and their relations, inverses and graphs; trigonometric identities and equations; solutions of right and oblique triangles; vectors; the polar coordinate system; conic sections; Boolean algebra and symbolic logic; mathematical induction; matrix algebra; sequences and series; and limits and continuity.

Pre Calculus is the fourth in a series of courses that are designed to not only enable our strongest students in the study of mathematics to undertake a course in Calculus upon the completion of the series but also to prepare them in pursuing mathematics education in college. The topics selected are part of this specific preparation while working within the Common Core Curriculum Standards. Pre Calculus typically includes a review of algebra, as well as an introduction to exponential logarithmic and trigonometric functions.

The scope of work transcends normal work in Trigonometry. Particular emphasis is placed on the trigonometric functions, graphs and inverse trigonometric functions, trigonometric identities and equations, polar coordinates and complex numbers, sequences and series, the nature of graphs, limit theorems, and parametric equations. The approach to teaching this subject matter incorporates the use of technology (graphing calculators, computers and when appropriate), attention to real-life applications, cooperative learning, alternative assessment strategies and

traditional deductive and inductive reasoning. Students enrolled in this course should have a command of the fundamentals of Algebra and experienced in handling selected advanced Algebra topics.

Trigonometry

Credits: 5 Credits

Prerequisite: Algebra 2

Trigonometry prepares students for eventual work in calculus and typically includes the following topics: trigonometric and circular functions; their inverses and graphs; relations among the parts of a triangle; trigonometric identities and equations; solutions of right and oblique triangles; and complex numbers.

Introductory College Mathematics

Credits: 5 Credits

Prerequisite: Placement test

This course covers topics including special products, factoring, and other operations on polynomials, rational and radical expressions, integral and rational exponents, and scientific notation. In addition, analytic and graphical methods of solving linear equations, linear systems, literal equations, and elementary polynomial equations are covered. Students are also introduced to the analytic geometry of functions, including lines, circles, and parabolas. Diverse applications are emphasized throughout the course.

Introduction to College Algebra

Credits: 5 Credits

Prerequisite: Algebra 2

This course is designed to take students from concrete arithmetic ideas to the more abstract algebraic forms of these ideas. Throughout the course, the emphasis is on showing students the practical use of concepts and developing understanding by translating English phrases and sentences into algebraic expressions. Topics include simplifying arithmetic and algebraic expressions, signed numbers, fractions, decimals, percents, estimations, geometric applications, linear equations, graphing, exponents, systems of linear equations, quadratic equations, and applications. Students who receive a “C” or better on the Essex County College (ECC) midterm and final exams will fulfill the ECC core proficiency requirements for mathematics.

Calculus

Credits: 5 Credits

Prerequisite: Pre Calculus

Calculus includes the study of derivatives, differentiation, integration, the definite and indefinite integral, and applications of calculus. Typically, students have previously attained knowledge of pre-calculus topics (some combination of trigonometry, elementary functions, analytic geometry, and math analysis). Topics include elementary functions, properties of functions and their graphs, limits and continuity, differential calculus, and integral calculus.

AP Calculus AB

Credits: 5 Credits

Prerequisite: Pre Calculus

Following the College Board's suggested curriculum designed to parallel college-level calculus courses, AP Calculus AB provides students with an intuitive understanding of the concepts of calculus and experience with its methods and applications. This course introduces calculus and includes the following topics: elementary

functions; properties of functions and their graphs; limits and continuity; differential calculus (including definition of the derivative, derivative formulas, theorems about derivatives, geometric applications, optimization problems, and rate-of-change problems); and integral calculus (including antiderivatives and the definite integral).

This course should prepare students to take the Advanced Placement Calculus AB exam. By the end of this course, students will have enough knowledge to move on to a College-Level Calculus course and be successful.

SCIENCE

Environmental Science

Credits: 5 Credits

Prerequisite: None

Environmental Science courses examine the mutual relationships between organisms and their environment. In studying the interrelationships among plants, animals, and humans, these courses usually cover the following subjects: photosynthesis, recycling and regeneration, ecosystems, population and growth studies, pollution, and conservation of natural resources.

The Environmental Science course builds upon the scientific foundations of previous science courses and focuses on Earth as a system and the role that humans, animals, and resources play in that system. The 21st century themes and skills outlined in this curriculum are addressed through the topics of sustainability, population/urbanization, and management of the commons, waste management, and energy.

Integrated Science

Credits: 5 Credits

Prerequisite: None

The specific content of Integrated Science courses varies, but they draw upon the principles of several scientific specialties—earth science, physical science, biology, chemistry, and physics—and organize the material around thematic units. Common themes covered include systems, models, energy, patterns, change, and constancy. These courses use appropriate aspects from each specialty to investigate applications of the theme.

Conceptual Integrated Science is offered to ninth grade students and serves as an extension of previous science courses. At the center of the course are the traditional sciences: Physical (Physics and Chemistry), Life, and Earth Science, which lay the foundation of the cross-disciplinary concepts that form the study of science in the 21st century. The course will provide the student with problems and challenges of real world events and phenomena that requires an understanding of how the sciences are conceptually connected, which results in our complex modern world.

Laboratory experiments, active participation, and hands-on activities are part of the learning experience. Emphasis is placed on developing inferential skills, utilizing the scientific method to solve problems, and the discovery of various phenomena in science.

The objective of Integrated Science is to provide a foundation that will serve the whole child for a lifetime and to instill processes within the student by which they can learn and employ skills, such as: Discovery, Change and Equilibrium, Problem-Solving, Analysis and Evaluation, and Question.

These processes will expand and enhance their natural curiosities about the world in which students live and enable them to gain the knowledge needed to be successful in both academia and life.

Biology

Credits: 5 Credits

Prerequisite: Integrated Science or Environmental Science

Biology courses are designed to provide information regarding the fundamental concepts of life and life processes. These courses include (but are not restricted to) such topics as cell structure and function, general plant and animal physiology, genetics, and taxonomy.

Biology is a second-year course that emphasizes Organization and Development, Matter and Energy Transformation, Interdependence, Heredity and Reproduction, and Evolution and Diversity. The course will provide cross-disciplinary concepts in from all fields including Math, English, and Technology. Learning will occur through laboratory experiments, active participation, inquiry based lessons, and hands-on activities. The Biology course objective is to provide each student with the knowledge that will serve them for their lifetime and aid each child in whichever profession they choose.

Honors Biology

Credits: 5 Credits

Prerequisite: Honors Criteria

Biology courses are designed to provide information regarding the fundamental concepts of life and life processes. These courses include (but are not restricted to) such topics as cell structure and function, general plant and animal physiology, genetics, and taxonomy. This honors course is designed to provide students with an in-depth level of instruction at an accelerated pace, and to extend the instruction by including application problems.

Honors Biology is designed to introduce students to the fundamental concepts of modern biology, with high performance expectations. The material presented in the honors course may be offered at an accelerated pace and/or will go in greater depth than the standard course, with the honors student having access to greater learning opportunities and being expected to do more reading and independent written work.

Chemistry

Credits: 5 Credits

Prerequisite: Biology

Chemistry courses involve studying the composition, properties, and reactions of substances. These courses typically explore such concepts as the behaviors of solids, liquids, and gases; acid/base and oxidation/reduction reactions; and atomic structure. Chemical formulas and equations and nuclear reactions are also studied.

Chemistry is a laboratory-based science course that will allow students to actively participate through hands-on activities. Emphasis is placed on developing inferential skills, utilizing the scientific method to solve problems, and the discovery of various phenomena in science. As a central science, chemistry provides the link between fundamental physical principles and the biological world we live in.

Core topics uncovered in this course include:

General Principles (Introduction to Science; Atoms and Elements), Thermochemistry (Matter and Energy), Electrochemistry (Chemical Bonding; Chemical Reactions), Reaction Chemistry (Chemical Reactions), Stoichiometry (The Mole).

At the end of the course, students will be able to perform the following skills with precision:

Problem-solving and Questioning (General Principles; The Mole), Analysis (Atoms and Elements; Matter and Energy), Prediction (Chemical Bonding; Chemical Reactions).

Honors Chemistry

Credits: 5 Credits

Prerequisite: Honors Criteria

Chemistry courses involve studying the composition, properties, and the reactions of substances. These courses typically explore such concepts as the behaviors of solids, liquids, and gases; acid/base and oxidation/reduction reactions; and atomic structures. Chemical formulas and equations and nuclear reactions are also studied. This **honors course** is designed to provide students with an in-depth level of instruction at an accelerated pace, and to extend the instruction by including application problems. The Honors Chemistry students will have access to greater learning opportunities and be expected to do more reading and independent written work.

Physics

Credits: 5 Credits

Prerequisite: Chemistry

Physics courses involve the study of the forces and laws of nature affecting matter, such as equilibrium, motion, momentum, and the relationships between matter and energy. The study of physics includes examination of sound, light, and magnetic and electric phenomena.

Physics is a laboratory-based science course that will allow students to actively explore and discover the physical world through hands-on activities. Emphasis is placed on developing predictive and inferential skills by utilizing scientific logic and scientific analytical methodology. Through justification practice and validity analysis, students will engage in discussions pertaining to current issues. As a science with deep roots in mathematics, this course also highlights the ability to solve real problems using real numbers and real situations. Creative problem solving in combination with accurate computational skills will prepare our students for 21st Century jobs, in particular within the STEM fields. This course will uncover four major topics; Mechanics, Energy, Electricity & Magnetism, and Vibrations & Light. As a foundational science, physics gives students advanced content knowledge of the physical principles that govern our Universe and answers some of the most timeless questions mankind has dared to ask.

SOCIAL STUDIES

United States History I

Credits: 5 Credits

Prerequisite: None

The United States History I course examines the history of the United States from the period of European Exploration to the Civil War era and includes a historical overview of political, military, scientific, and social developments. Through the US History I course, students will examine various historical events that took place during the 18th century and their impact on the United States, as well as the World. They will consider multiple perspectives to gain a comprehensive view about the social, political, economic cause and effect relationships that led to shaping America. Hence, students will explore and investigate the development of life in Americas in order to understand events in the past and how they relate to the present and future. The course has been enriched with literacy, interdisciplinary connections, infusion of technology and 21st century learning skills to ensure that students will be afforded every resource and opportunity to become active, informed, critical thinkers. The United States History course has been designed to provide students with the skills, knowledge and attitudes they need to become “civic minded, globally aware, and socially responsible citizenry”.

Advanced United States History I

Credits: 5 Credits

Prerequisite: None

The Advanced United States History I examines the history of the United States from the British Colonization period to the Civil War and/or the Reconstruction era and includes a historical overview of political, military, scientific, and social developments. In this course, students will examine various historical events that took place during the 18th century and their impact on the US and World. As an honors course, students should expect a rigorous content level and pace. This course demands greater independence and responsibility as it concentrates on the development of higher-level skills such as reading and analyzing text and engaging in comprehensive discussions. Students in the Advanced US History course will consider multiple perspectives to gain a comprehensive view about the social, political, economic cause and effect relationships that led to shaping America. This analysis of these relationships will allow students to gain a greater understanding of past events and how they relate to modern issues in our global society. The Advanced US History I course places a strong emphasis on the incorporation of literacy skills to adequately prepare students for the demands of both college and the workplace. Concomitantly, there is a strong focus on making interdisciplinary connections, infusing technology and developing 21st century learning skills to ensure that students will be afforded every resource and opportunity to become active, informed, critical thinkers. The Advanced United States History course has been designed to provide students with the skills, knowledge and attitudes they need to become “civic minded, globally aware, and socially responsible citizens”.

United States History II

Credits: 5 Credits

Prerequisite: United States History I

The U.S. History II course examines the history of the United States from the Civil War and/or Reconstruction era through the present time and includes a historical review of political, military, scientific, and social developments. This course examines the growth and development of the United States from the post-Civil War era into the twenty-first century. Students will investigate the origins and development of various concepts, themes, and issues that Americans faced, such as political reforms and social movements. They will acquire a basic understanding and appreciation for American traditions and values that developed from global interactions. Using this knowledge of history as a context, students will be able to identify what it means to be an American both past and present. Analysis of the evolution of the nation's cultural, political, economic institutions and attitudes will be achieved by exploring the Harlem Renaissance, Amendments, Civil Rights movements, the arts and more. There will be emphasis on the social developments and interactions of the ever-growing population of American society.

Diaspora

Credits: 5 Credits

Prerequisite: None

Diaspora examines the history, politics, economics, society, and culture of various racial/ethnic groups impacted by the forced removal from their ancestral lands. This course assists students in developing an understanding of the ramifications of prejudice, racism and stereotyping in societies both past and present. Concomitantly, this course will help students to develop an awareness of the value of pluralism and encourages tolerance of diversity in a pluralistic society. An emphasis will be placed on the historical impact of the Holocaust, Slavery and Genocide.

World History

Credits: 5 Credits

Prerequisite: United States History I & II

The World History course provides students with the ability to understand their world and to build literacy skills in civics, economics, and geography. In this course, students will cover the following topics: The Emergence of the First Global Age (1350-1770); The Renaissance, Reformation, Scientific Revolution, and Enlightenment (1350-1700); The Age of Revolutions (1750-1914); The Era of the Great Wars (1900-1945); and The 20th Century Since 1945 (1945-Today). This course is enriched with literacy, interdisciplinary connections, technology applications, and 21st century learning skills to ensure that all students are afforded every resource and opportunity possible to become active and informed critical thinkers.

Economics

Credits: 5 Credits

Prerequisite: None

The Economics course provides students with an overview of economics with primary emphasis on the principles of microeconomics and the U.S. economic system. These courses may also cover topics such as principles of macroeconomics, international economics, and comparative economics. Economic principles may be presented in formal theoretical contexts, applied contexts, or both.

Advanced Placement World History (APWORLD)

Credits: 5 Credits

Prerequisite: United States History I and II

The Advanced Placement World History course is structured around the investigation of five course themes and 19 key concepts in six different chronological periods, from approximately 8000 B.C.E to the present. The AP World History course develops students' capacity and ability to think and reason in a deeper, more systematic way, better preparing them for subsequent college courses. The following course themes present areas of historical inquiry that students will investigate throughout the year: (1) Interaction Between Humans and the Environment, (2) Development and Interaction of Cultures, (3) State-Building, Expansion, and Conflict, (4) Creation, Expansion, and Interaction of Economic Systems, and (5) Development and Transformation of Social Structures. This course is enriched with literacy, interdisciplinary connections, technology applications, and 21st century learning skills to ensure that students are provided with the opportunity to be an active, informed and contributing member of their global community.

Advanced Placement United States History (APUSH)

Credits: 5 Credits

Prerequisite: United States History I & World History*

Advanced Placement United States History is a chronological survey course covering the time period from Colonial America (1607) to contemporary America (1990). The Essex County Vocational Technical School's Advance Placement program in United States History is designed to provide students with the analytical skills and factual knowledge to deal critically with the problems and issues in American history. The course prepares students for immediate and advanced college courses by making demands on the student equivalent to those made by full year introductory college courses. Students will learn to assess historical materials—their relevance to a given interpretive problem, their reliability, and their importance. Students will also be prepared to take the AP U.S. History exam offered by the College Board and earn college credit or placement at the college or university of their choice.

(*prerequisite for 12th grade students)

Advanced Placement United States Government and Politics (APUSGP)

Credits: 5 Credits

Prerequisite: US History I and US History II

AP United States Government and Politics introduces students to key political ideas, institutions, policies, interactions, roles, and behaviors that characterize the political culture of the United States. The course examines politically significant concepts and themes, through which students learn to apply disciplinary reasoning, assess causes and consequences of political events, and interpret data to develop evidence-based arguments. By the end of this course, students will be prepared to take the AP U.S. Government and Politics exam offered by the College Board and earn college credit or placement at the college or university of their choice.

TEALC

HST 101 World Civilization I

Credits: 3 College Credits through Essex County Community College

Prerequisites: Grade of “C” or better in ENG 096 and RDG 096 or placement; it is recommended that HST 101 be taken before HST 102

World Civilization I is a college level course offered through Essex County Community College. This course examines aspects of the major social, political, economic, religious, and intellectual developments of world civilization from earliest times to the seventh century. Emphasis is placed on the ideas and institutions that have shaped the culture of world civilization. As a result of this course, students will understand historical events and movements in World, Western, non-Western, or American societies and assess their subsequent significance.

COMPREHENSIVE HEALTH & PHYSICAL EDUCATION

Health I

Length/Credits: Year/3.75 Credits (w/ PE)

Prerequisite: None

Character Education is embedded in the following units of study in the 9th grade health curriculum. Students will explore the following topics for one semester. Describe how individuals in healthy relationships share thoughts and feelings, have fun together, develop mutual respect, share responsibilities and goals, and provide emotional security for one another. Effective prevention and intervention strategies address domestic or dating violence (e.g., rules of consent). Informed and educated decisions on when and if to become sexually active and how it affects one’s physical, social, and emotional health. Responsible actions regarding sexual behavior impact the health of oneself and others. Discussion of topics regarding sexuality requires a safe, supportive environment where sensitivity and respect is shown toward all. Relate the use of alcohol and other drugs to decision-making and risk for sexual assault, pregnancy, and STI’s. Early detection strategies and regular physical exams assist in the prevention and treatment of illness or disease. Pregnancy, childbirth, and parenthood are significant events that will cause numerous changes in one’s life and the lives of others.

Health II

Length/Credits: Year/3.75 Credits (w/ PE)

Prerequisite: None

Character Education will be embedded in the 10th grade curriculum in all of the units describe below. Students will learn to identify unsafe situations and choosing appropriate ways to reduce or eliminate risk that contributes to the safety of self and others. Describe the causes of intentional and unintentional injuries in adolescents and young adults in driving accidents. Strategies will be implemented to prevent accidents from occurring. Summarize the components of the traffic safety system and explain how people contribute to making the system effective. Analyze the causes and the consequences of noncompliance with the traffic safety system. Students will develop a rationale to persuade peers to comply with traffic and safety laws and avoid driving distracters. Students will understand the cause of conflicts and strategize ways to prevent conflicts from occurring. Negotiation and mediation are tools for resolving conflicts. It is important for teens to know the different types of violence and how to protect themselves. Students will identify the types of abuse: physical, mental, and emotional. Students will be able to describe the health care system including all the ways that people receive and pay for medical care. Both outdoor and indoor air pollution can put people’s health at risk. Outdoor air pollution also contributes to the greenhouse effect and global warming. Students will devise strategies to become “green” at home, school, community and globally.

Health III

Length/Credits: Year/3.75 Credits (w/ PE)

Prerequisite: None

The Essex County Vocational Technical Schools Health III, a course based on New Jersey’s Core Curriculum Standards for Comprehensive Health Education, is designed to provide 11th grade students the fundamentals to assist in adopting and maintaining a healthy lifestyle. This course will offer students the ability to establish behaviors that enhance and promote good health and decrease or avoid health risks. From a variety of instructional approaches, students engage in the development of practical health information; determine personal values that sustain healthy behaviors and lifestyles; acquire the necessary skills to practice, enhance, and maintain healthy behaviors and lifestyles.

This course includes the administration of essential topics in a sequential, comprehensive, designed approach health education curriculum. Essential topics include: personal health and wellness, decision making and goal setting, social and emotional health, tobacco- and alcohol-free lifestyle, legal and illegal drugs and drug-free lifestyle, diseases and health conditions, and proper nutrition. This course provides students with the knowledge and skills of health and wellness core concepts, personal growth and development, interpersonal communication, decision making and goal setting, examining influences, accessing information, health enhancing behaviors and lifestyles, and health and wellness promoting skills.

Health IV

Length/Credits: Year/3.75 Credits (w/ PE)

Prerequisite: None

Character Education continues to be embedded throughout the units of the 12th grade curriculum. Students will explore the following topics for one semester: 1. Deciding to act and the care provided may help save a life in an emergency. Ensuring your safety in an emergency is your top priority. 2. Protection from disease transmission and knowing how to properly move a person. 3. Basic legal information before giving care. 4. Discussion of basic anatomical terms and understanding the body’s structures and how they work will allow more accurate communication with EMS personnel about a person’s condition. 5. Recognizing an emergency and following the emergency action steps: CHECK – CALL – CARE can help make a difference and even save a life in an emergency. 6. Deciding to act can have a significant impact on the person’s chance of survival. Life-Threatening Emergencies including: discussions and skill assessments: checking an unconscious and conscious person, CPR

for an adult, child and infant, using an AED for an adult, child, and infant, conscious and unconscious choking for an adult, child and infant. 7. Discussions on cardiac and breathing emergencies, external and internal bleeding, shock. 8. Discussions and skill assessments for injuries including: soft tissue injuries, musculoskeletal injuries, and splinting and injuries to the head, neck, spine, chest, abdomen and pelvis. 9. Medical emergencies including: sudden illnesses, poisoning, bites and stings, substance misuse and abuse, heat related illnesses and cold related emergencies. 10. Special situations including water-related emergencies, pediatric, older adult and special situations.

Physical Education I-IV

Length/Credits: Integrated

Prerequisite: Course must be taken with one of the Health courses

The physical education program is designed for students to develop the skills and attitudes necessary to achieve and maintain lifelong health and fitness. Students will be encouraged to gain an active appreciation of the positive role of physical fitness in overall health and well-being, and to develop socially useful participation skills. The program seeks to provide for the equal participation of all students through a variety of experiences leading to the development of positive self-concept, creativity and enthusiasm for participation. The physical education program is divided in five main activities: foundations of wellness, health related fitness, individual physical activities, movement skills performance, and team physical activities.

VISUAL & PERFORMING ARTS

Visual & Performing Arts: Music

Length/Credits: Semester/5.0 Credits

Prerequisite: None

The Essex County Vocational Technical Schools Performing Arts Music program is a course designed to provide 12th grade students with a more in depth study of the music. This course identifies core content skills to be acquired based and moves students along the competency-based continuum of skills through multilevel performance based projects which are introduced to the class on a continual basis, enabling the teacher to meet the individual needs of each student. This course introduces students to the production of performing arts through music. All students will receive training in music fundamentals, music appreciation and music literacy skills to broaden their appreciation and understanding of music as an art form. Students will be creating, performing, and responding to multiple forms of music education. Students develop familiarity with music theory, the basics of piano keyboarding and voice training, as well as the creative process of basic writing and composing. Students will learn to create digital music and record their performances using Mac Book Pro technologies.

Visual & Performing Arts: Theatre

Length/Credits: Semester/5.0 Credits

Prerequisite: None

The Essex County Vocational Technical Schools Performing Arts Theatre program is a course designed to provide 12th grade students with a more in depth study of theatre. This course identifies core content skills to be acquired based and moves students along the competency-based continuum of skills through multilevel performance based projects which are introduced to the class on a continual basis, enabling the teacher to meet the individual needs of each student. This course introduces students to the production of performing arts through theatre. All students will receive training in theatre fundamentals, theatre appreciation and theatrical

literacy skills to broaden their appreciation and understanding of theatre as an art form. Students will be creating, performing, and responding to multiple forms of theatre education. Students develop familiarity with theatre through public speaking, poetry, and monologue and scene selections. Students will also be introduced to the creative process through original script and monologue creations. Students will learn to use their bodies and voices as creative instruments to communicate a range of emotions. Students will use technology to view relevant theatrical performances and create scripts.

Visual & Performing Arts: Dance

Length/Credits: Semester/5.0 Credits

Prerequisite: None

The Essex County Vocational Technical Schools Performing Arts Dance program is a course designed to provide 12th grade students with a more in depth study of the dance. This course identifies core content skills to be acquired based and moves students along the competency based continuum of skills through multilevel performance based projects which are introduced to the class on a continual basis, enabling the teacher to meet the individual needs of each student. This course introduces student's content including modern dance techniques, introducing Horton, Graham and Limon philosophies. Ballet vocabulary will also enhance the student's knowledge while exploring movement as a creative art form. Through their experiences, students will develop kinesthetic awareness, proper body alignment, physical strength, flexibility, endurance and general care of the dance instrument. Dance history, introduction to human anatomy and ballroom dancing will also be explored. Improvisational skills and basic principles of dance composition will be introduced. Students will combine the use of technique, improvisation and choreographic principles to explore the choreographic process.

WORLD LANGUAGE

Spanish 1A: Spanish Conversation & Culture

Length/Credits: Semester/2.5

Prerequisite: None

This course is designed to offer novice World Language students the opportunity to begin developing communicative competence in Spanish and learn about the target culture. It will use the three modes of communication: interpersonal, interpretational and presentational emphasized in national and in the New Jersey Core Curriculum Content Standards. The practice of listening, pronunciation, conversation and reading will be accompanied by reviews of previous general grammar's knowledge and vocabulary. Culture, on the other hand, will be incorporated into each thematic unit in order to provide students with a better understanding of the art, music, literature, and society of the Spanish-speaking world in order to understand the meaning of cultural identity. This course will fulfill 2.5 credits for the state graduation requirement in World Language

Spanish 1B: Composition and Grammar

Length/Credits: Semester/2.5 Credits

Prerequisite: Spanish 1A

This course is designed to help students to improve reading and writing skills in Spanish by developing not only communicative skills, but also linguistics competence of the main, grade level appropriate, language structures. In this manner, students will be able to read and understand more complex passages, and write coherent and logical responses, developed from an accurate knowledge of grammar and vocabulary. There will be a thorough review

of all the important grammatical concepts covered on *Spanish Conversation and Culture*; and language's learning, linguistic and communicative competence, will be reinforced with brief explanations of the linguistic concepts study in exercises, stories, compositions and situations. Videos, cultural presentations, film, literature and music will be also used to improve the understanding of vocabulary and offer the possibility of expressing themselves in Spanish. This course will fulfill 2.5 credits for the state graduation requirement in World Language.

Spanish for Heritage Speakers I

Length/Credits: Semester/2.5 Credits

Prerequisite: None

Spanish for Heritage Speakers is course designed to provide appropriate instruction for students with Hispanic language and cultural backgrounds, specifically heritage language learners. We believe that treating this group of students, as a homogeneous entity is not only challenging for the teacher but also detrimental to our educational philosophy of providing educational opportunities that are not only challenging but also *developmentally appropriate*. The course focus in several language domains: reading development, orthography, lexical expansion, grammar, writing and composition; but it also includes discussion of modern texts, conversations, grammar review, and cultural activities. Students, thus, will engage in a variety of higher level, linguistically/culturally related activities, using all three modes of communication (interpretive, interpersonal, and presentational). All tasks and activities included in this curriculum has been carefully crafted and clearly correlated to the New Jersey Core Curriculum Content Standards for World Language, mathematics, social studies, and science, and Career education. They also reflect the expectations described on NJ Standards clarification project, ACTFL standards, and FLENJ benchmarks.

Spanish for Heritage Speakers II

Length/Credits: Semester/2.5 Credits

Prerequisite: Spanish for Heritage Speakers I

This course continues the “back to the origin” trip initiated in *Spanish for Heritage Speakers I*. The students are immersed into the Spanish language using well-known poetry and prose from Latin America and Spain's writers, which will also give a glimpse into the historical, economic and societal events taking place during a time period that goes from the discovery to the post-modern era. This thematic approach will further develop the students' use of grammar and vocabulary, reading development, orthography, and in writing and composition. Throughout this course students will be presented with several authentic language and content rich experiences in which they will be expected to process and respond to linguistically complex materials using some or all of the language domains (i.e. listening, speaking, reading, and writing) and academic and social background knowledge. At the conclusion of the course, students will finish with a cumulative portfolio that highlights the standards, essential questions, and inter-disciplinary projects, reflection activities, in which the target language is practiced.

Spanish I

Length/Credits: Semester/5.0 Credits

Prerequisite: none

In this course students will learn to use a world language in addition to English to engage in meaningful conversation, to understand and interpret spoken and written language, and to present information, concepts, and ideas, while also gaining an understanding of the perspectives of other cultures. Through language study, they will make connections with other content areas, compare the language and culture studied with their own, and participate in home and global communities.

Spanish II

Length/Credits: Semester/5.0 Credits

Prerequisite: Spanish I

Spanish II curriculum has been designed to acquaint our grade twelve students with the four language skills (listening, speaking, reading, and writing), and the cultural background of the Spanish-speaking countries throughout the development of meaningful thematic units. As the student advances in proficiency, linguistic as well as communicative competence grade-level appropriate, the Spanish II program aims to involve the student in the Core-Curriculum Standards, twenty first century education oriented as mandated by the state of New Jersey. This approach not only yields students who are proficient in basic grammar and vocabulary, but will include experiences that promote the use of language as a communicative tool, task oriented instruction and learning: i.e. an ability to communicate about oneself and others, an ability to express the fundamentals of daily life, an ability to interact with others in the target language.

Spanish Civilization & Society

Length/Credits: Semester/2.5 Credits

Prerequisite: None

Spanish Civilizations and Society builds upon skills developed in previous Spanish courses, extending students' ability to understand and express themselves in Spanish and increasing their vocabulary. Typically, students learn how to engage in discourse for informative or social purposes, write expressions or passages that show understanding of sentence construction and the rules of grammar, and comprehend the language when spoken slowly. This course will allow students to focus uniquely on the history and literature of Spanish-speaking people to deepen their understanding of the target culture.

Furthermore, emphasis is on all four-language skills development simultaneously: listening, speaking, reading, and writing. Written and oral communicative skills include a variety of topics and thematic units: family life, community, physical environment, meal taking, health and welfare, education, earning a living, leisure, public and private services, shopping, travel and current events.

AP Spanish Language & Culture

Credits: 5

Prerequisite: Spanish I or Spanish for Native/Heritage Speakers

AP Spanish Language and Culture course has been designed to provide advanced high school students with a rich and rigorous opportunity to study the language and culture of the Spanish-speaking world that is approximately equivalent to an upper-intermediate college or university Spanish course, as per College Board's suggested curriculum. The course engages students in an exploration of culture in both contemporary and historical contexts. It also develops students' awareness and appreciation of products, both tangible (e.g., tools, books) and intangible (e.g., laws, conventions, institutions); practices (patterns of social interactions within a culture); and perspectives (values, attitudes, and assumptions that underlie both practices and products). Students have the opportunities to demonstrate their proficiency in each of the three modes in the Intermediate to Pre-Advanced range as described in the ACTFL Performance Guidelines for K-12 Learners. The course is completely in Spanish, and takes a holistic approach to language proficiency and recognizes the complex interrelatedness of comprehension and comprehensibility, vocabulary usage, language control, communication strategies, and cultural awareness.

Applied Spanish in Careers

Length/Credits: Semester/2.5 Credits

Prerequisite: None

Applied Spanish in Careers builds upon skills acquired in *Spanish Civilization & Society* to enlightened citizenship able to function in today's global marketplace. As boundaries between countries are dissolving, the need for learning world languages has become a necessary component for linking with the rest of the world. As a consequence of this, *Applied Spanish in Careers* focuses on developing the skills required to succeed in the 21st Century workplace. The *Applied Spanish in Careers* ' curriculum has been designed to acquaint our grade twelve students with the four language skills (listening, speaking, reading, and writing), and the cultural background of the Spanish-speaking countries throughout the development of meaningful thematic units. As the student advances in proficiency, linguistic as well as communicative competence grade-level appropriate, the program aims to involve the student in the Core Curriculum Standards, twenty first century education oriented, as mandated by the state of New Jersey. This approach not only yields students who are proficient in basic grammar and vocabulary, but it also include experiences that promote the use of language as a communicative tool in the workplace to gain the skills to be successful citizens of a global society.

* *Core courses and electives (e.g. Economics, Law & Public Safety, and Horticulture) may be offered by individual schools, depending on specific educational programs. For more information about the courses and programs offered, contact the respective school.*
